## **REASONS FOR ALLOWANCE**

1. The following is an examiner's statement of reasons for allowance: None of the prior art of record teach or suggest a molding device for producing containers by blow molding, the device comprising at least one mold having at least two half-molds, mutually displaceable between an open position in which they are separated from one another and a closed position in which they are tightly pressed against one another by respective cooperating bearing faces, defining joint plane, the two half molds having at least two respective corresponding edges of their respective bearing faces which are radially designed in the form of two mutually overlapping edges with respective opposing mating faces in the closed position of the mold, locking means being functionally associated with the overlapping edges, wherein the locking means comprise: one of the overlapping edges located on the inside has a mating face which terminates in a hook and which has a recess adjacent to the hook; the other of the overlapping edges located on the outside has a mating face which terminates in a hook and which has a recess adjacent to the hook; the respective hooks and recesses of the internal and external overlapping edges extend substantially over the entire height of the mold; a gib extending substantially over the entire height of the mold is mounted rotatably about a pin corresponding to one of its edges in one of the recesses and in contact with the respective hook; and drive means are functionally associated with the gib for pivoting about its pin between two extreme positions, whereby the gib may occupy two functional positions, namely; a position inserted into its mounting recess in which the gib does not engage the opposing recess of the overlapping edge and allows

Art Unit: 1791

a mutual relative displacement of the two half molds; and a projecting position in which the gib is pivoted toward the outside of its mounting recess and the two half molds being in the closed position engages in the opposing recess of the other overlapping edge such that, when the two half molds are subjected to forces separating them from one another, the gib is engage with the two respective hooks of the two overlapping edges and mechanically holds the two half-molds. The closest prior art (Albrecht 6,918,754) discloses a single hook and a rotating pin to lock the mold, but fails to disclose the two hooks with the rotating gib as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert B. Davis whose telephone number is 571-272-1129. The examiner can normally be reached on Monday-Friday 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on 571-272-1316. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
